

To the Owners of our Concrete Products,

Congratulations on the purchase of your new concrete products, made with love and care by Form Concrete Studios. We hope you enjoy them as much as we do.

Your concrete has been sealed using a penetrating densifier. This is different from our kitchen hybrid polyurethane. This produces a more natural matte finish that compliments your fire hearth.

As with any sealer, our sealer will slowly wear overtime, this can be minimised by following the tips below:

- **Clean with a warm damp cloth:** Use only mild detergent or a light vinegar solution if necessary. Refrain from using chemical cleaners, including “natural” or anything containing citrus or bleach. For marks such as permanent marker, spot cleaning can be done with isopropyl alcohol, using as little as possible.
- **Clean up any spills as they occur:** especially acidic spills and oil.
- **Do not cut directly on concrete:** This prevents excess wear and scratches on the concrete and sealer.
- **Anything left on the concrete for long periods can stain:** For example, use a dish under a pot planter.
- **Treat your concrete with care:** All of our products are designed and made to withstand normal wear and tear in their new home. With a little care your concrete will look amazing for years to come.

Your concrete can be resealed when and if required. Please get in touch with us and we'll be happy to offer this service at our hourly rate.

Thanks Again,

The Form Concrete Studios Crew

Any questions, please don't hesitate to get in touch. Enjoy your new concrete product!
