

To the owners of our concrete products,

Congratulations on the purchase of your new concrete products, made with love and care by Form Concrete Studios. We hope you enjoy them as much as we do.

Your concrete has been sealed using a penetrating densifier. This is different from our kitchen hybrid polyurethane. This produces a more natural matte finish that will compliment your fire hearth.

As with any sealer, our sealer will slowly wear overtime. Concrete will naturally patina as it ages as well. Please see below for tips regarding maintenance:

- **Clean with a warm damp cloth:** Use only mild detergent or a light vinegar solution if necessary. Refrain from using chemical cleaners, including “natural” or anything containing citrus or bleach. For marks such as permanent marker, spot cleaning can be done with isopropyl alcohol, using as little as possible.
- **Clean up any spills as they occur:** especially acidic spills and oil.
- **Anything left on the concrete for a long period of time can stain:** For example, use a plate under a pot planter. Liquid trapped under weight will push further into the concrete.
- **Avoid dragging objects on the concrete:** Such as firewood, fire tools, pot plants, etc. Try to avoid scratches on the concrete as it will wear through the sealer.
- **Treat your concrete with care:** All of our products are designed and made to withstand normal wear and tear in their new home. With a little care, your concrete will look amazing for years to come.

Any questions, please don't hesitate to get in touch. Enjoy your new concrete product!

Thanks again,

The Form Concrete Studios Crew
